Referrals

< 5

Visits Included a Referral

*More than one referral can be made in a single visit.

Data Notes and Limitations

- The mobile supervised consumption service is anonymous to reduce barriers, limiting the ability to create linkages to other healthcare services.
- Unique visitors are based on a distinct count of a visitor's nickname inputted in NucleusLabs. Due to the anonymity of the service a visitor has the potential to have more than one nickname.
- Consumption visits are based on a count of supervised duration recorded in the consumption field.
- Harm reduction visits are based on visits where one or all of the following were provided: foils, glass pipes, meth pipe or naloxone kit.
- Aboriginal self identity response options are: Yes, No, Unknown and Not Asked. For the purposes of this report the percentage "Entered" refers to the number of responses recorded as Yes, No or Unknown are included.
- A visitor can have more than one referral in a single visit, therefore referrals should not be compared to total visits.
- Nelson started charting in Nucleus Labs as of September 2021.
- Nelson legacy data contains information on consumption and overdoses prior to September 2021.
